# WEATHER

## WEATHER SYNOPSIS BY REGION:

### **NORTHERN CALIFORNIA AND CENTRAL COASTAL AREAS:**

#### **Eureka Weather:**

A developing ridge of high pressure will result in warming temperatures across interior northwest California through the end of the week. Stratus will continue to impact coastal areas each night and morning. An upper level low off the central California coast will bring the potential for thunderstorms Friday into this weekend.

#### **Medford Weather:**

Weak westerly flow will continue for the next couple of days. A marine push will move in tonight. The weather for Tuesday and Wednesday will be similar to this past weekend with temperatures remaining above normal.

#### **Reno Weather:**

High pressure will create hot and very dry conditions this week with record highs likely by Friday. Thunderstorms are possible along the Sierra Crest beginning Friday afternoon and evening with the potential for thunderstorm activity to increase this weekend and early next week.

#### **San Francisco Weather:**

A gradual warming trend will begin today and likely peak on Thursday as high pressure builds over the Great Basin. The hottest temperatures will be across the inland valleys where 90s will be common; however, onshore breezes should keep the coast and bays near or slightly above normal. Some modest cooling may develop by Friday then will need to watch for possible monsoonal moisture moving in from the south over the weekend with more seasonable temperatures.

### **CENTRAL CALIFORNIA AND SOUTHERN SAN JOAQUIN VALLEY:**

#### **Sacramento Weather:**

Warming trend begins today bringing another round of hot weather, peaking Thursday and Friday. Shower and thunderstorm activity is possible this Friday through the weekend, mainly for the mountains.

#### **Hanford Weather:**

Temperatures will remain near normal through Tuesday as high pressure will remain east of the area. By Wednesday, high pressure will return and high temperatures will once again warm to above normal and continue into the weekend.

# WEATHER

## WEATHER SYNOPSIS BY REGION:

### **SOUTHERN CALIFORNIA:**

#### **Los Angeles Weather:**

High pressure aloft will weaken the next few days and allow for a continued slight cooling trend. Night through morning clouds and fog will persist and should deepen from Thursday morning to the weekend as a weak upper low sets up off the coast. High pressure aloft will build late this week allowing for the possibility of a few interior afternoon and evening showers or thunderstorms Sunday into early next week.

#### **Extreme Southwestern California including Orange, San Diego, Western Riverside and Southwestern San Bernardino Counties:**

High pressure will keep the weather fair and dry much of this week with above normal daytime temperatures. Marine clouds will still visit the coastal areas each night and should increase through the week as the marine layer deepens slightly. Then by the weekend and into next week, monsoonal moisture will overspread from the southeast with increasing cloudiness and humidity and bringing a chance for afternoon and evening showers and thunderstorms each day mainly in the mountains and deserts.

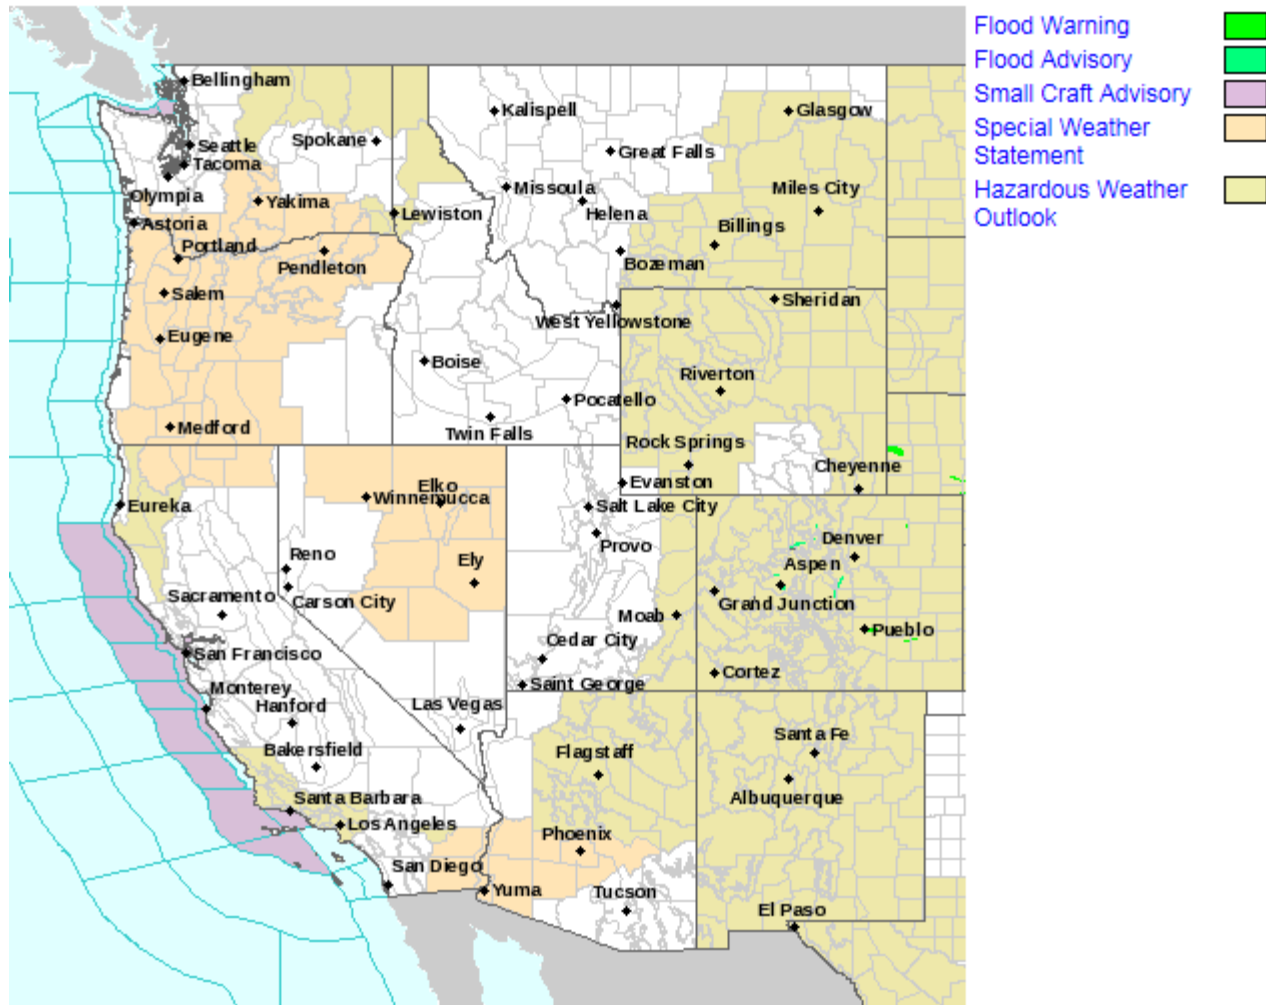

#### **Southeast California Weather:**

Above normal temperatures will persist through much of the upcoming week, but will retreat from the record-tying values seen last week. Moisture will begin to move into the area from Mexico with increasing chances of mountain showers and thunderstorms from Wednesday onward. Thunderstorms will bring the threat of strong gusty winds and potential for blowing dust to the deserts. An uptick in storm activity area wide is possible by the late weekend into early next week.
